2TEST

Handheld Spectrum Analyzer R&S®FSH

R&S®FSH3 100 kHz to 3 GHz
R&S®FSH6 100 kHz to 6 GHz

Third Edition June 2006

ROHDE&SCHWARZ

Spectrum analysis anywhere, anytime – on earth and in space

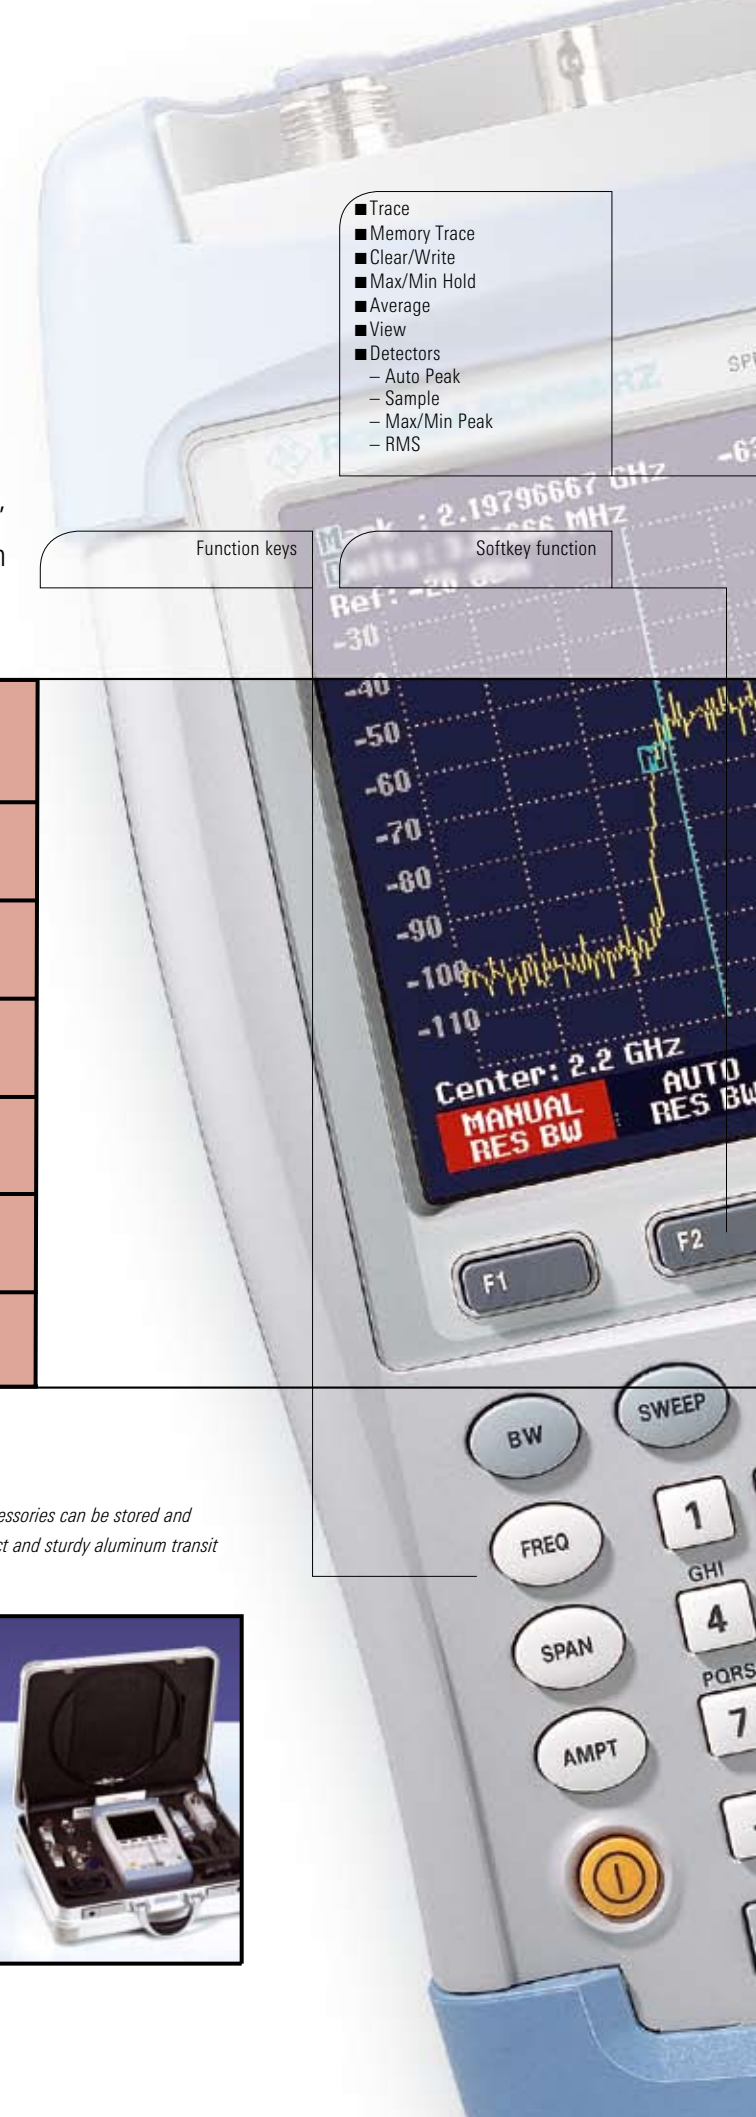
The R&S®FSH is the ideal spectrum analyzer for rapid, high-precision, cost-effective signal investigations. It provides a large number of measurement functions and so can handle anything from the installation or maintenance of a mobile radio base station up to on-site fault location in RF cables as well as development and service – an extensive range of applications.

Due to its excellent characteristics, the R&S®FSH3 is used on board the International Space Station (ISS) for distance-to-fault measurements on RF antenna cables.

Handy, robust and portable

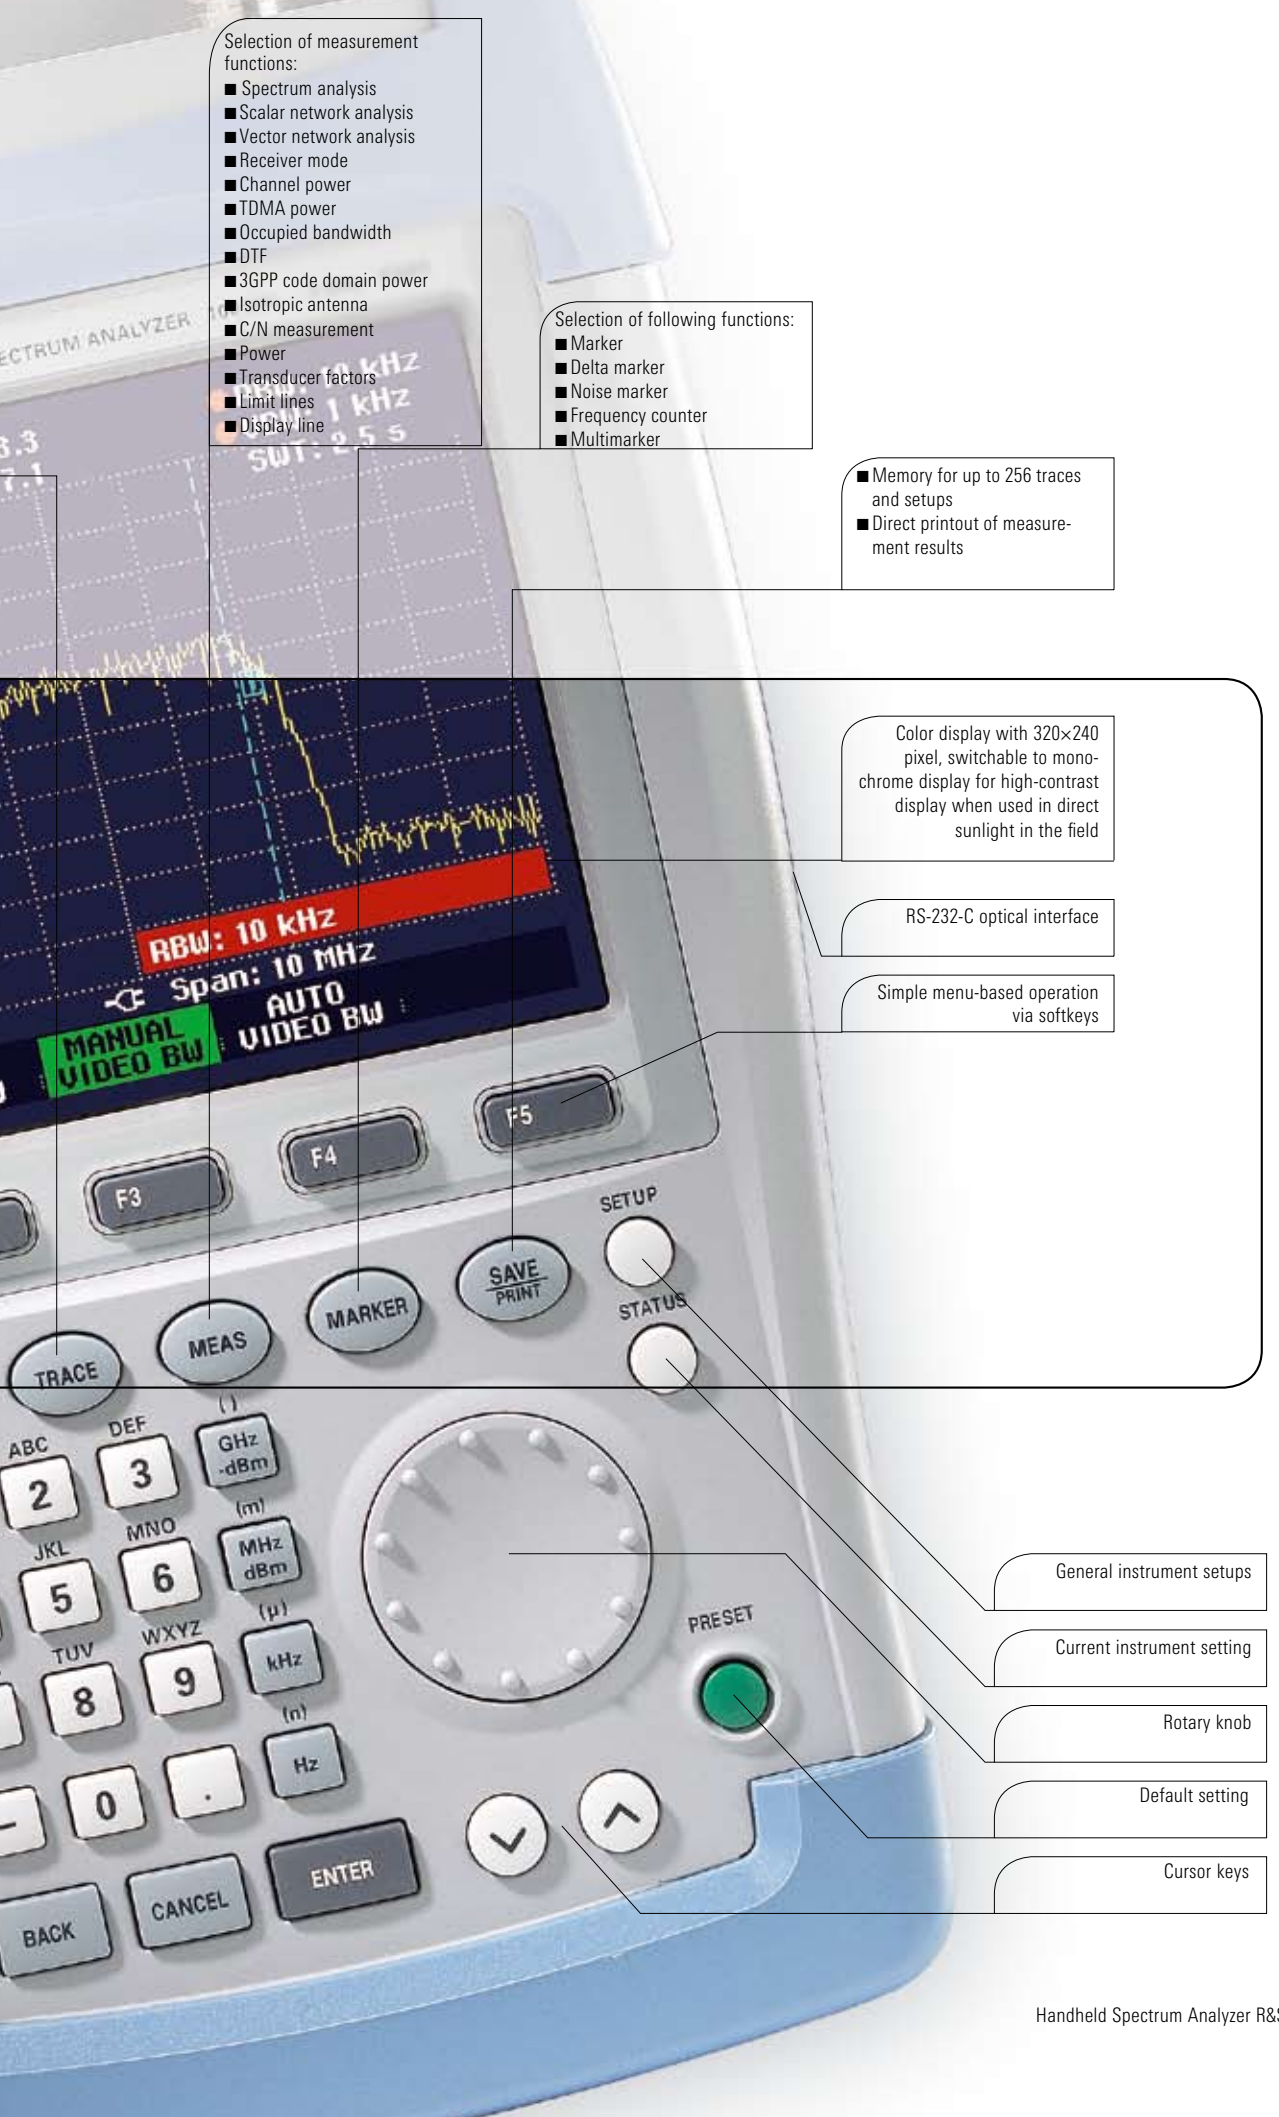
The R&S®FSH has been designed as a robust, portable spectrum analyzer that can be used in the field.

- **Robust edge protection, stable carrying handle**
- **Easy operation**
- **Four hours operating time on battery power**
- **Storage of up to 256 traces and setups**
- **Easy data transfer to PC**
- **High measurement accuracy**
- **Best RF characteristics in its class**



The R&S®FSH can, of course, also be used on the lab bench. The R&S®FSH has an adjustable, fold-out stand to position the instrument to an optimal display viewing angle.

The R&S®FSH and its accessories can be stored and transported in the compact and sturdy aluminum transit case.



Selection of measurement functions:
■ Spectrum analysis
■ Scalar network analysis
■ Vector network analysis
■ Receiver mode
■ Channel power
■ TDMA power
■ Occupied bandwidth
■ DTF
■ 3GPP code domain power
■ Isotropic antenna
■ C/N measurement
■ Power
■ Transducer factors
■ Limit lines
■ Display line
Selection of following functions:
■ Marker
■ Delta marker
■ Noise marker
■ Frequency counter
■ Multimarker
■ Memory for up to 256 traces and setups
■ Direct printout of measurement results
Color display with 320×240 pixel, switchable to monochrome display for high-contrast display when used in direct sunlight in the field
RS-232-C optical interface
Simple menu-based operation via softkeys
RBW: 10 kHz
Span: 10 MHz

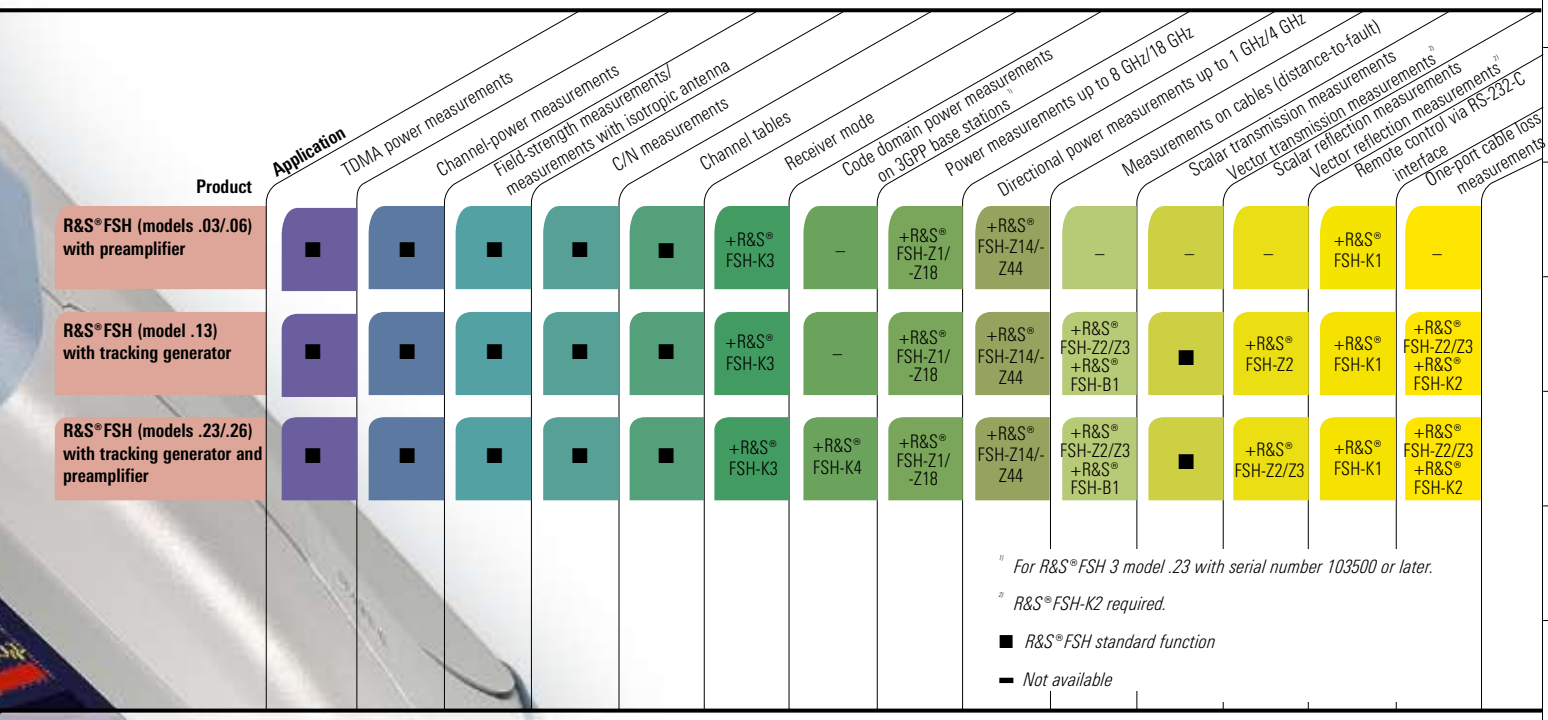
Data in brief

	R&S®FSH3	R&S®FSH6
Frequency range	100 kHz to 3 GHz	100 kHz to 6 GHz
Resolution bandwidths	1 kHz to 1 MHz (model .13) 100 Hz to 1 MHz (models .03 and .23)	100 Hz to 1 MHz
Video bandwidths	10 Hz to 1 MHz	
Displayed average noise level	typ. –114 dBm (1 kHz) (model .13) typ. –135 dBm (100 Hz) (models .03 and .23)	typ. –135 dBm (100 Hz)
TOI	typ. 13 dBm	
SSB phase noise	<–100 dBc (1 Hz) at 100 kHz from carrier	
Detectors	sample, max/min peak, auto peak, RMS	
Level measurement uncertainty	<1.5 dB, typ. 0.5 dB	
Reference level	–80 dBm to +20 dBm	
Dimensions	170 mm × 120 mm × 270 mm	
Weight	2.5 kg	

R&S®FSH – options and applications

The R&S®FSH is available as a 3 GHz or 6 GHz model either with or without an internal tracking generator. When the tracking generator is included, the R&S®FSH can be used for distance-to-fault (DTF) measurements, scalar and vector network analysis, and one-port cable loss measurement. Almost all models come standard with an adjustable preamplifier, making them suitable for measuring very small signals. Power sensors are available as accessories for high-precision terminating power measurements up to 8 GHz or 18 GHz as well as for directional power measurements up to 4 GHz. The following tables show possible configurations for various applications and an overview of available models.

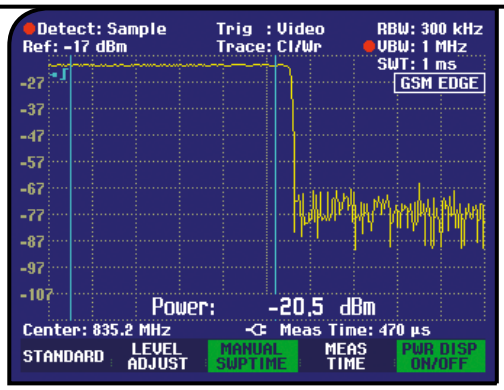


R&S®FSH – models

	Frequency range	Tracking generator	Output power of tracking generator	Preamplifier	Resolution bandwidth
R&S®FSH3 model .03	100 kHz to 3 GHz	–	–	■	100 Hz to 1 MHz
R&S®FSH3 model .13	100 kHz to 3 GHz	■	–20 dBm	–	1 kHz to 1 MHz
R&S®FSH3 model .23	100 kHz to 3 GHz	■	–20 dBm/0 dBm selectable	■	100 Hz to 1 MHz
R&S®FSH6 model .06	100 kHz to 6 GHz	–	–	■	100 Hz to 1 MHz
R&S®FSH6 model .26	100 kHz to 6 GHz	■	–10 dBm (f < 3 GHz) –20 dBm (f > 3 GHz)	■	100 Hz to 1 MHz

TDMA power measurements

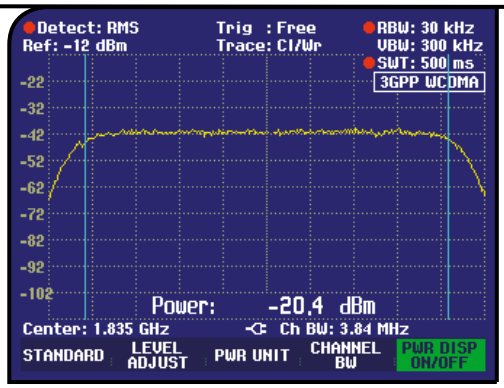
By means of the TDMA POWER function, the R&S®FSH performs time-domain power measurements within a timeslot of TDMA (time division multiple access) methods. All the settings required for the GSM and EDGE standards are predefined on the R&S®FSH to make these measurements easier for the user. In addition, up to five user-definable instrument setups can be loaded into the R&S®FSH using the R&S®FSH View software.

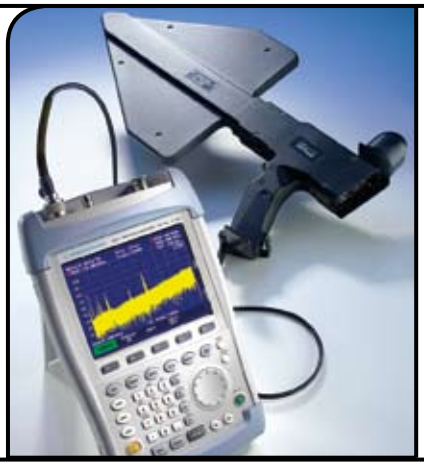


Channel-power measurements

The R&S®FSH determines the power of a definable transmission channel by means of the channel-power measurement function. A channel-power measurement for the digital mobile radio standards 3GPP WCDMA, cdmaOne and CDMA2000® 1x is performed at a keystroke with all the correct instrument settings. With the R&S®FSH View software, the user can quickly and easily define further standards and load them into the R&S®FSH.

CDMA2000® is a registered trademark of the Telecommunications Industry Association (TIA USA)





Field-strength measurements

When measuring electric field strength, the R&S®FSH takes into account the specific antenna factors of the connected antenna. Field strength is displayed directly in dBµV/m. If W/m² is selected, the power flux density is calculated and displayed. In addition, frequency-dependent loss or gain of, for example, a cable or an amplifier can be corrected. For quick and easy result analysis, the R&S®FSH provides two user-definable limit lines with automatic limit monitoring.

R&S®FSH with Active Directional Antenna R&S®HE200 (optional accessory)

Field-strength measurements with isotropic antenna

When used with the R&S®TS-EMF isotropic antenna, the R&S®FSH can determine the direction-independent resultant field strength in the frequency range from 30 MHz to 3 GHz. For measuring the resultant field strength, the antenna has three orthogonal antenna elements. The R&S®FSH successively triggers the three antenna elements and calculates the resultant field strength. The calculation takes into account the antenna factors for each individual antenna element as well as the cable loss of the connecting cable.

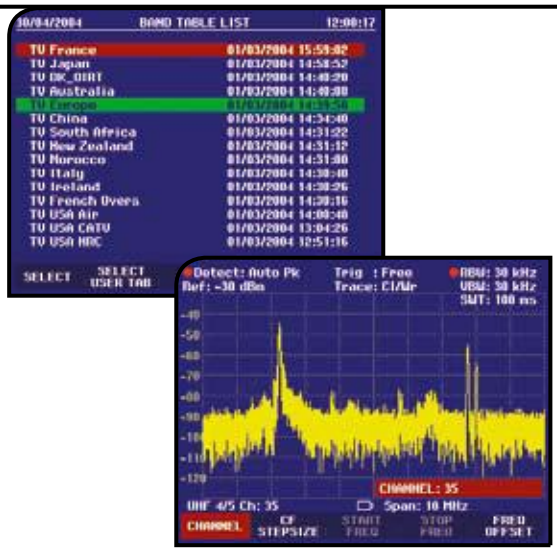
R&S®FSH with Isotropic Antenna R&S®TS-EMF (optional accessory)

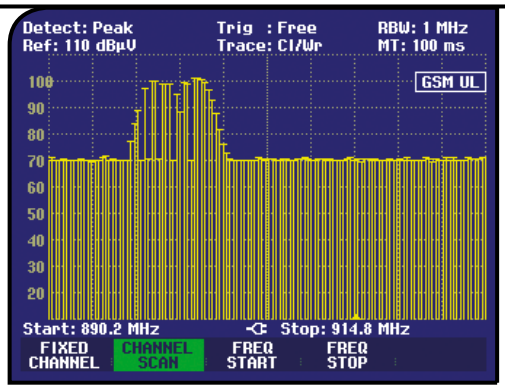
C/N measurements

The R&S®FSH offers a carrier/noise (C/N) measurement for determining the ratio of carrier power to noise power or carrier power to noise power density. The R&S®FSH supports three different modes for carrier power measurement. In the CW TX mode, the R&S®FSH determines the power of an unmodulated carrier. In the digital TX mode, it determines the channel power of a reference channel, as is common with digitally modulated carriers (e.g. the DAB, DVB, DVB-T, DVB-H and J.83/A/B/C standards). Furthermore, the ATSC standard for digital terrestrial television with 8VSB modulation is supported. In the analog TV mode, the R&S®FSH measures the peak power of the vision carrier with amplitude-modulated TV signals.

Channel tables

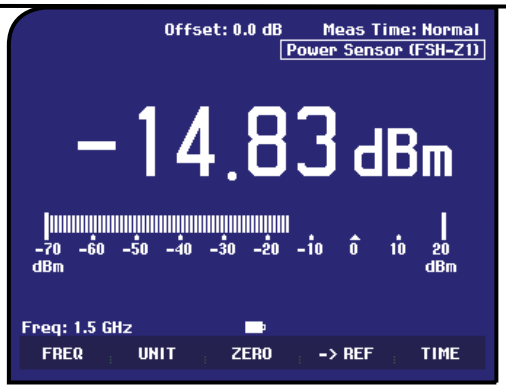
If preferred, the R&S®FSH can be tuned by channel numbers rather than by entering the frequency. The channel number is displayed instead of the center frequency. Users who are accustomed to channel assignments, which are common in TV and mobile radio applications, can operate the R&S®FSH more easily. The channel tables are generated with the R&S®FSH View software and loaded into the R&S®FSH. The R&S®FSH includes TV channel tables for a number of countries





Receiver mode

When equipped with the option R&S®FSH-K3, the R&S®FSH can be operated as a receiver for monitoring and precompliance EMC applications. Measurements are performed at a predefined frequency with a user-selectable measurement time. In the scan mode, the R&S®FSH sequentially measures each level at various frequencies defined in a channel table. The channel tables are generated with the R&S®FSH View software and loaded into the R&S®FSH. For a few TV transmitter and mobile radio standards, the tables are predefined. In addition, the CISPR bandwidths 200 Hz, 9 kHz, 120 kHz and 1 MHz are available for EMI emission measurements. The R&S®FSH offers peak, average, RMS and quasi-peak detectors.

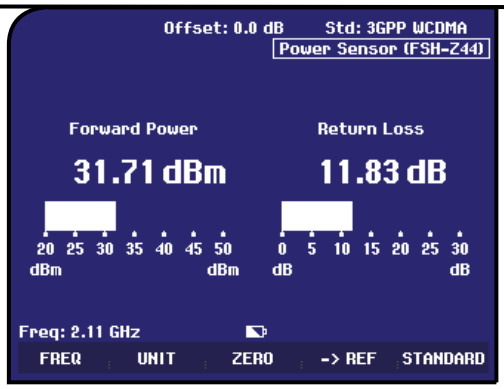


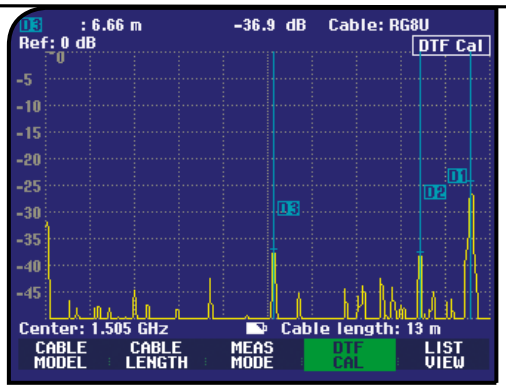
Power measurements

The Power Sensors R&S®FSH-Z1 and R&S®FSH-Z18 expand the R&S®FSH to a high-precision RF power meter up to 8 GHz and 18 GHz respectively. As with thermal sensors, the true RMS value of the measured signal is obtained over the entire measurement range of –67 dBm to +23 dBm irrespective of the signal waveform. In particular with modulated signals, additional measurement errors can thus be prevented, and handling becomes easy.

Directional power measurements

The Directional Power Sensors R&S®FSH-Z14 and R&S®FSH-Z44 turn the R&S®FSH into a full-fledged directional power meter with a frequency range of 25 MHz to 1 GHz and 200 MHz to 4 GHz. The R&S®FSH can then simultaneously measure the output power and the matching of transmitter system antennas under operating conditions. The power sensors measure average power up to 120 W and normally eliminate the need for any extra attenuators. They are compatible with the common standards GSM/EDGE, 3GPP WCDMA, cdmaOne, CDMA2000® 1x, DVB-T and DAB. Additionally, the peak envelope power (PEP) can be determined up to a maximum of 300 W.





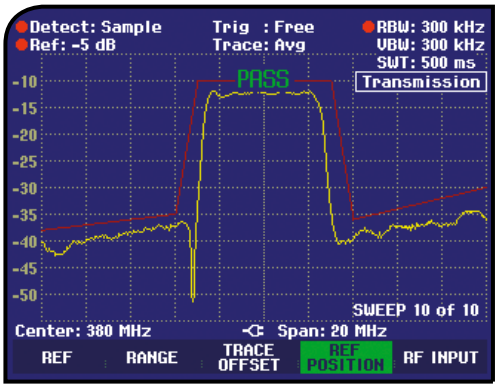
Measurements on cables (distance to fault)

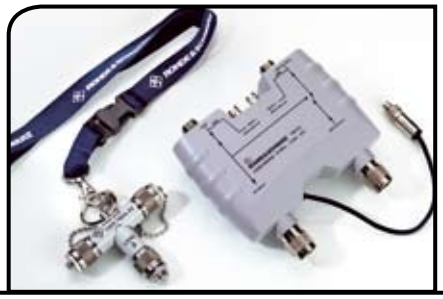
The option R&S®FSH-B1 allows the distance to any faults in an RF cable to be determined rapidly and accurately. Distance-to-fault measurements using the R&S®FSH-Z2/-Z3 VSWR bridge give an immediate overview of the state of the device under test (return loss and distance, see figure). The marker-zoom function allows detailed analysis of faults with a resolution of up to 1024 pixel.

Only applies to the R&S®FSH with tracking generator and options R&S®FSH-B1 (distance-to-fault measurement) and R&S®FSH-Z2/-Z3 (VSWR bridge) installed

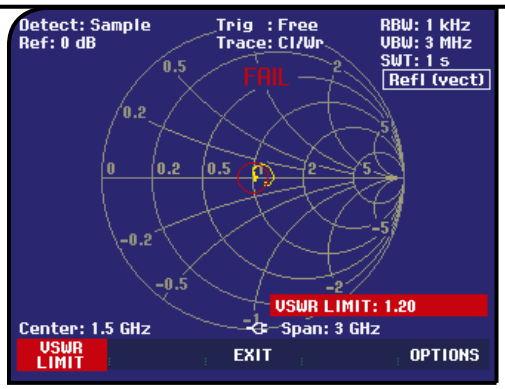
Scalar transmission and reflection measurements with VSWR bridge (R&S®FSH-Z2/-Z3 as accessory)

The R&S®FSH with built-in tracking generator rapidly determines the transmission characteristics of cables, filters, amplifiers, etc, with a minimum of effort. When equipped with the R&S®FSH-Z2/-Z3 VSWR bridge (10 MHz to 3 GHz/6 GHz), the R&S®FSH can also measure the matching (return loss, reflection coefficient or VSWR) of an antenna, for example. The bridge is screwed directly onto the R&S®FSH's RF input and tracking generator output without involving cumbersome, extra cabling. The innovative design of the R&S®FSH-Z3 VSWR Bridge with integrated RF bypass switch allows the user to make spectrum and transmission measurements also with the bridge connected. Active components such as amplifiers can be supplied directly via the RF cable by means of the two integrated bias tees.



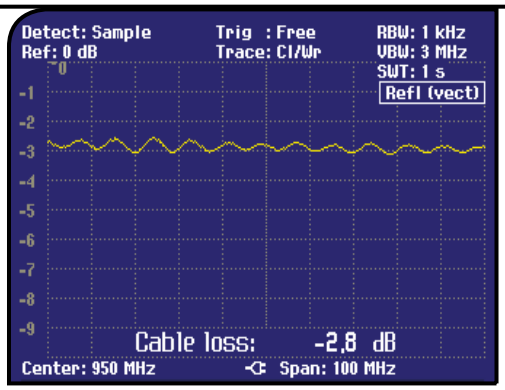


R&S®FSH-Z3 VSWR bridge



Vector transmission and reflection measurements

Compared to scalar measurements, the optional R&S®FSH-K2 vector measurement significantly increases measurement accuracy and dynamic range for transmission and reflection measurements. This is possible because the receive signal is analyzed with respect to magnitude and phase. After calibration, complex correction of the system errors can be effected by the R&S®FSH. To allow detailed analysis of the matching of, for example, an antenna, the magnitude and phase are displayed in a Smith chart. A user-definable limit line comes in handy when evaluating the measurement results.

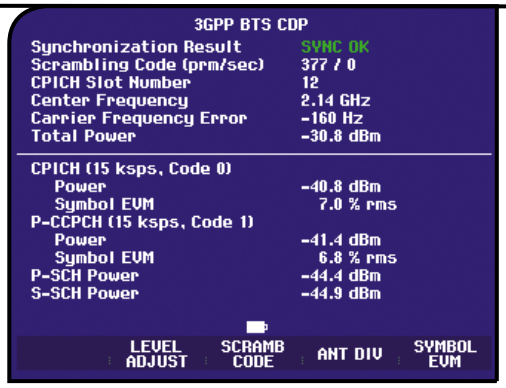


One-port cable loss measurements

The R&S®FSH with tracking generator and VSWR bridge can determine the cable loss of previously installed long cables without much effort. One end of the cable is connected to the VSWR bridge, and the other end is terminated with a short circuit or simply left open. The calculated cable loss represents the average value within the displayed frequency range. The loss at specific frequencies is determined via markers. The one-port cable loss measurement is only available with the option R&S®FSH-K2.

3GPP FDD code domain power measurements on base stations

The R&S®FSH-K4 option allows the code domain power measurements on a 3GPP base station. It measures the total power and the power of the most important code channels, such as the common pilot channel (CPICH), primary common control physical channel (P-CCPCH), primary synchronization channel (P-SCH) and secondary synchronization channel (S-SCH). In addition, the frequency offset of the carrier frequency and the error vector magnitude (EVM) are measured and displayed. R&S®FSH-K4 provides an automatic function for fast and optimal setting of the reference level. In the case of base stations with two antennas, the user can select which antenna the spectrum analyzer should synchronize to (antenna diversity).



Available for the R&S®FSH 3 (11145.5850.23) with serial number 103500 or later

Locating EMC weak spots

The Near-Field Probe Set R&S®HZ-15 is a diagnostic tool for locating EMC weak spots on printed boards, integrated circuits, cables, shieldings and other trouble spots. The Near-Field Probe Set R&S®HZ-15 can handle emission measurements from 30 MHz to 3 GHz. Its sensitivity can be enhanced by adding the Preamplifier R&S®HZ-16, which has a frequency range of up to 3 GHz, a gain of approx. 20 dB and a noise figure of 4.5 dB. In combination with the R&S®FSH, the preamplifier and near-field probe set are a cost-effective means of analyzing and locating sources of interference during development.

R&S®FSH with near-field probe set and DUT

R&S®FSH with Directional Power Sensor R&S®FSH-Z44

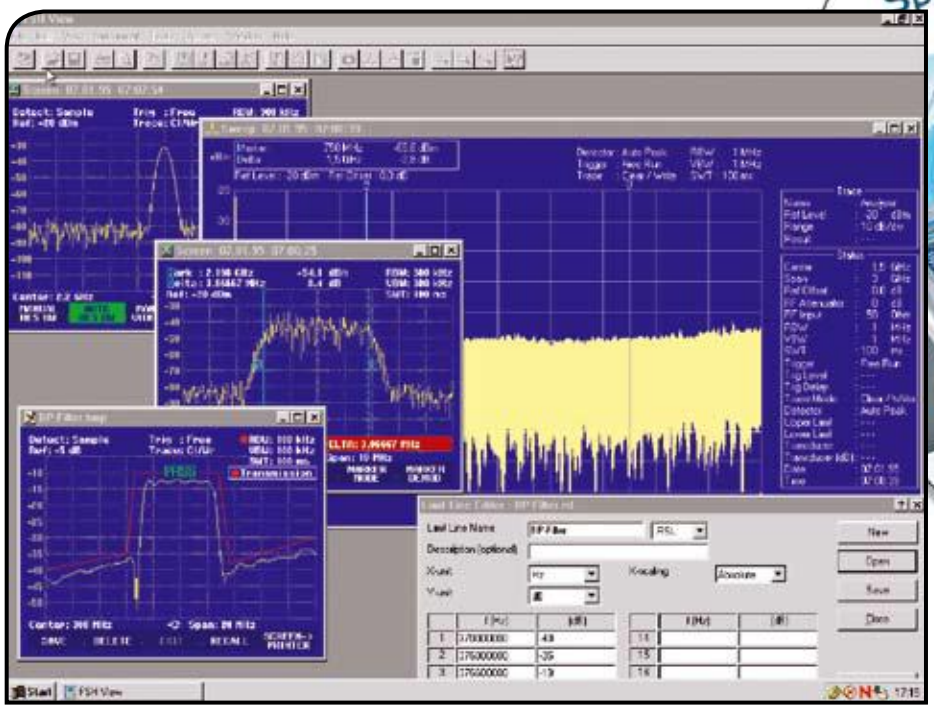
Data transfer between R&S®FSH and PC (interface cables and software are supplied with the instrument)

The R&S®FSH-Z29 calibration standard is designed for field use;. it is a combination of a 50 Ω load, open and short

R&S®FSH with R&S®FSH-Z2 VSWR bridge

Control Software R&S®FSH View

The powerful software package for documenting your measurements is supplied with every R&S®FSH.



Features

- Runs under Windows 98/ME/NT/2000/XP
- Rapid and simple transfer of measurement data from the R&S®FSH to a PC and vice versa
- Data export in ASCII or MS Excel format
- Printout of all relevant data via Windows (screenshot of the R&S®FSH display for documentation)
- Graphics data stored in standard formats (.bmp, .pcx, .png, .wmf)
- Permanent and continuous transfer of sweeps to the PC; facilities for subsequent analysis (markers, zoom, etc)
- Storage space for traces and measurement data as well as for comparisons of current and previous measurements (available space is limited only by the size of the hard disk of the controlling PC)
- Automatic storage of measurement results at selectable intervals
- Generation of cable data with a built-in cable editor; downloading to the R&S®FSH for distance-to-fault measurements (R&S®FSH-B1)
- Editor for generating limit lines, user-definable standards (measurement of occupied bandwidth, channel power and TDMA power), transducer factors and correction factors for taking into account external attenuators or amplifiers, as well as channel lists
- Macro function for Word for fast and easy documentation of measurement results
- Connection between PC and R&S®FSH via interference-free, RS-232-C optical interface

Specifications

Specifications apply under the following conditions: 15 minutes warm-up time at ambient temperature, specified environmental conditions met and calibration cycle adhered to. Data without tolerances: typical values. Data designated as "nominal": design parameters, i. e. not tested.

		R&S®FSH3	R&S®FSH6
Frequency			
Frequency range		100 kHz to 3 GHz	100 kHz to 6 GHz

Impedance		50 Ω	
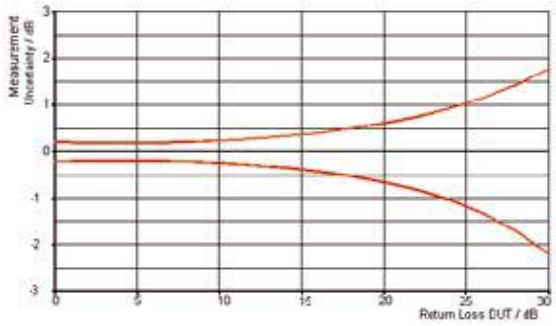
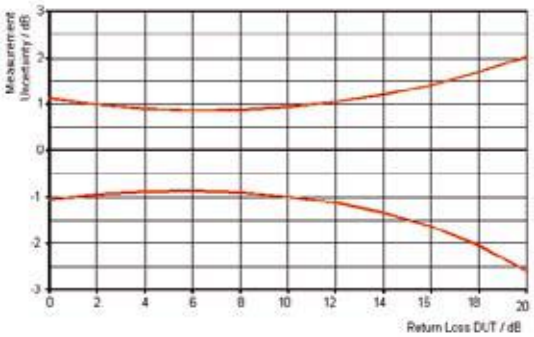
Return loss			
DC to 3 GHz		>43 dB	>40 dB, typ. 46 dB
3 GHz to 6 GHz		–	>37 dB, typ. 43 dB
Power-handling capacity		1 W	1 W
General data			
Power consumption		–	3 mW (nominal)
Dimensions (W × H × D)		169 mm × 116 mm × 30 mm	149 mm × 144 mm × 45 mm
Weight		485 g	620 g
Distance-to-Fault Measurement	**option R&S®FSH-B1 only with R&S®FSH3 models .13/.23/.26 and R&S®FSH-Z2/-Z3 VSWR bridges**		
Display		301 pixel	
Maximum resolution, distance to fault	maximum zoom	cable length/1023 pixel	
Display range			
Return loss		10, 5, 2, 1 dB/div, linear	
VSWR	with option R&S®FSH-K2	1 to 2 and 1 to 6, in addition 1 to 1.2 and 1 to 1.5	
Reflection factor (ρ)		0 to 1, 0 to 0.1, 0 to 0.01, 0 to 0.001	
milliRHO (mρ)		0 to 1000, 0 to 100, 0 to 10, 0 to 1	
Cable length	depending on cable loss	3 m to max. 1000 m	
Maximum permissible spurious signal		1st mixer 1 dB compression point typ. +10 dBm IF overload at reference level typ. +8 dB	

		R&S®FSH3	R&S®FSH6
Transmission measurements (only with R&S®FSH3 models .13, .23 and R&S®FSH6 model .26)			
Frequency range		5 MHz to 3 GHz	5 MHz to 6 GHz
Dynamic range			
10 MHz to 2.2 GHz	scalar mode	typ. 60 dB	typ. 80 dB
	vector mode, option R&S®FSH-K2	typ. 80 dB	typ. 90 dB
2.2 GHz to 3 GHz	scalar mode	typ. 50 dB	typ. 70 dB
	vector mode, option R&S FSH-K2	typ. 65 dB	typ. 85 dB
3 GHz to 5 GHz	scalar mode	–	typ. 40 dB
	vector mode, option R&S®FSH-K2	–	typ. 55 dB
5 GHz to 6 GHz	scalar mode	–	typ. 35 dB
	vector mode, option R&S®FSH-K2	–	typ. 50 dB
Reflection measurements (only with R&S®FSH3 model .13 or .23, R&S®FSH6 model .26 and R&S®FSH-Z2)			
Frequency range		10 MHz to 3 GHz	10 MHz to 3 GHz
Display range of return loss		10, 20, 50, 100 dB, selectable	
VSWR display range		1 to 2, 1 to 6, , 1 to 10 , 1 to 20 selectable with option R&S®FSH-K2 also 1 to 1.2 and 1 to 1.5	
Reflection factor (ρ) display range		0 to 1, 0 to 0.1, 0 to 0.01, 0 to 0.001	
milliRHO (mρ) display range		0 to 1000, 0 to 100, 0 to 10, 0 to 1	
Measurement uncertainty		see diagrams	



Measurement uncertainty with vector measurements (option R&S®FSH-K2)



Measurement uncertainty with scalar measurements

		R&S®FSH3	R&S®FSH6
3GPP FDD code domain power BTS/Node B measurement (only with R&S®FSH-K4 1300.7633.02 and R&S®FSH3 model .23)[6]			
Frequency range		10 MHz to 3 GHz	–
Carrier frequency uncertainty		(test case 6.3 in line with 3GPP 25.141)	–
Measurement range		±1 kHz	–
Measurement uncertainty	SNR > 30 dB	< 50 Hz + Δf_{ref} [7] (σ = 20 Hz)	–
Total power	SNR > 30 dB	(test case 6.2.1 in line with 3GPP 25.141)	–
Measurement range	frequency > 1 MHz +20 °C to +30 °C	–60 dBm < P_{total} < 20 dBm	–
Measurement uncertainty	–40 dBm < P_{total} < 20 dBm P_{REF_LEV} – 30 dB < P_{total} < P_{REF_LEV} + 3 dB	±1.5 dB, typ. 0.5 dB	–
CPICH power	SNR > 30 dB	(test case 6.2.2 in line with 3GPP 25.141)	–
Measurement range	–40 dBm < P_{total} < 20 dBm	P_{total} – 20 dB < P_{CPICH} < P_{total}	–
Measurement uncertainty	– P_{total} –20 dBm < P_{CPICH} < P_{total}	±1.5 dB, typ. 0.5 dB	–
P-CCPCH power	SNR > 30 dB		
Measurement range	–40 dBm < P_{total} < 20 dBm	P_{total} – 40 dB < P_{PCCPCH} < P_{total}	–
Measurement uncertainty	P_{total} –20 dBm < P_{PCCPCH} < P_{total}	±1.5 dB, typ. 0.5 dB	–
PSCH/SSCH power	SNR > 30 dB		–
Measurement range	–40 dBm < P_{total} < 20 dBm	P_{total} – 30 dB < P_{SCH} < P_{total}	–
Measurement uncertainty	P_{total} –20 dBm < P_{PSCH} < P_{total}	±2.5 dB, typ. 1.5 dB	–
Symbol EVM			
Measurement range		3 % < EVM_{symbol} < 25 %	–
Measurement uncertainty	3 % < EVM_{symbol} < 10 %	typ. ±2.5 %	–
	10 % < EVM_{symbol} < 20 %	typ. ±3 %	
Residual EVM_{symbol}		typ. 3 %	

[6] *As of serial no. 103500.*

[7] *Δf_{ref} = uncertainty of reference frequency.*

General data

Display	14 cm (5.7") LC color display
Resolution	320 × 240 pixel
Memory Settings and traces	CMOS RAM up to 256
Environmental conditions	
Temperature	
Operating temperature range R&S®FSH powered from internal battery R&S®FSH powered from AC power supply	 0 °C to +50 °C 0 °C to +40 °C
Storage temperature range	–20 °C to +60 °C
Battery charging mode	0 °C to +40 °C
Climatic conditions	
Relative humidity	95 % at +40 °C (EN 60068)
IP class of protection	51
Mechanical resistance	
Vibration, sinusoidal	meets EN 60068-2-1, EN 61010-1 5 Hz to 55 Hz: max 2 g, 55 Hz to 150 Hz: 0.5 g constant, 12 minutes per axis
Vibration, random	meets EN 60068-2-64, 10 Hz to 500 Hz, 1.9 g, 30 minutes per axis
Shock	meets EN 60068-2-27, 40 g shock spectrum
RFI suppression	meets EMC directive of EU (89/336/EEC) and German EMC legislation
Immunity to radiated interference Level display at 10 V/m (reference level ≤–10 dBm) Input frequency IF Other frequencies	10 V/m <–75 dBm (nominal) <–85 dBm (nominal) < displayed noise level

Power supply

AC supply	plug-in AC power supply (R&S®FSH-Z33) 100 V AC to 240 V AC, 50 Hz to 60 Hz, 400 mA
External DC voltage	15 V to 20 V
Internal battery	NiMH battery, type Fluke BP190 (R&S®FSH-Z32)
Battery voltage	6 V to 9 V
Operating time with fully-charged battery	4 h with tracking generator off, 3 h with tracking generator on
Lifetime	300 to 500 charging cycles
Power consumption	typ. 7 W
Safety	meets EN 61010-1, UL 3111-1, CSA C22.2 No. 1010-1
Test mark	VDE, GS, CSA, CSA-NRTL
Dimensions (W × H × D)	170 mm × 120 mm × 270 mm
Weight	2.5 kg
